RATING SYSTEM We evaluate every style to help you compare its unique features. Each style is rated on color variation and level of scraping intensity. Our merchants look at three areas: Scrape Level, Shade Variation, and Total Character Rating.

SHADE VARIATION Some styles feature an overall color impression with little variation, while others can show great intensity and variation from one plank to another, or even within a single plank. Our scale gives you a sense of how much color variation you can expect.

SCRAPE LEVEL describes the amount and depth of texture in each style. The higher the rating, the deeper the impression.

TOTAL CHARACTER RATING combines scrape level and shade variation to gauge the overall character of each style on a scale of 1-10.
